

NIGHTLIFE DISCOVERY & EVENT INFRASTRUCTURE PLATFORM

MVP BUILD BLUEPRINT

Prepared for Founders, Investors, and Development Teams

1. PRODUCT POSITIONING

Working Product Identity

A mobile-first nightlife infrastructure platform built for emerging ASEAN markets.

The MVP is designed to validate:

- event discovery demand
- promoter operational tooling
- digital ticketing behavior
- QR-based entry systems
- venue onboarding economics
- payment integration feasibility

The product is NOT simply an event listing app.

The MVP establishes the foundation for:

- a vertical SaaS platform
 - a marketplace ecosystem
 - future fintech integrations
 - nightlife behavioral analytics
 - creator economy infrastructure
-

2. MVP GOALS

Primary Objectives

Goal 1 — Validate Event Discovery Demand

Can users consistently discover nightlife events through the platform instead of fragmented social media?

Goal 2 — Validate Digital Ticketing

Will users trust mobile ticket purchasing and QR entry systems?

Goal 3 — Validate Promoter Adoption

Will organizers adopt the operational dashboard?

Goal 4 — Validate Venue Partnerships

Can venues gain measurable operational value from analytics and structured customer flow?

3. MVP FEATURE PRIORITIES

PHASE 1 — CORE MVP

These features **MUST** exist before launch.

Consumer App Features

3.1 Authentication

Required

- phone number login
- Google login
- Apple login (iOS)
- OTP verification

User Profile

- username
 - profile photo
 - favorite genres
 - saved events
 - ticket history
-

3.2 Event Discovery Feed

Core Features

- trending events
- nearby events
- featured events
- category filters
- date filters
- venue filters

Event Categories

- EDM
- Hip-Hop
- Rock
- Techno
- Live Band
- Underground
- Campus Events
- Festivals
- Afterparty

Event Cards

Each card contains:

- cover image
 - event title
 - venue
 - time/date
 - ticket price
 - attendance count
 - verification badge
-

3.3 Event Detail Page

Required Sections

- event description
- organizer profile
- venue information
- lineup/DJs
- ticket pricing tiers
- event gallery
- map integration

- share button

CTA

- Buy Ticket
 - Reserve Table (future)
 - Invite Friends
-

3.4 Ticket Purchase System

MVP Ticket Flow

1. Select ticket type
2. Choose quantity
3. Redirect to payment
4. Payment confirmation
5. Generate QR ticket
6. Send email + in-app ticket

Supported Payment Methods

- KBZPay
- WavePay
- AyaPay
- CBPay
- Bank Transfer

Ticket Types

- General Admission
 - VIP
 - Early Bird
 - Couple Package
 - Backstage/VIP+ (future)
-

3.5 QR Ticket System

Requirements

- unique QR per ticket
- anti-duplicate validation
- real-time scan verification
- offline fallback mode
- scanner audit logs

Scanner App

Separate lightweight app or web dashboard:

- scan QR
 - validate status
 - mark attendance
 - reject duplicates
-

3.6 Saved Events + Notifications

Users Can

- save events
- follow organizers
- receive reminders
- receive event updates
- get cancellation notices

Push Notifications:

- upcoming events
 - ticket sales
 - event changes
 - trending events nearby
-

Organizer Dashboard Features

3.7 Event Creation Dashboard

Promoter Inputs

- event name
- description
- date/time
- venue
- ticket tiers
- capacity
- lineup
- event images
- ticket limits

Dashboard Functions

- publish/unpublish
 - edit event
 - duplicate event
 - sales tracking
 - attendee export
-

3.8 Ticket Analytics

Dashboard Metrics

- tickets sold
 - revenue generated
 - attendance rate
 - conversion rate
 - scan rate
 - peak purchase times
-

3.9 Guest List Management

Features

- add/remove guests
 - manual check-in
 - VIP tagging
 - export CSV
 - attendance status
-

Venue Dashboard Features

3.10 Venue Profiles

Venue Information

- photos
- address
- genres
- capacity
- operating hours
- social links

- verified badge
-

3.11 Venue Analytics

Metrics

- monthly attendance
 - demographic trends
 - popular event categories
 - peak event days
 - repeat attendance
-

4. MVP USER TYPES

User Roles

Consumer

- discover events
- buy tickets
- manage profile

Promoter

- create/manage events
- track ticket sales
- scan tickets

Venue Manager

- manage venue profile
- access analytics

Admin

- approve venues
 - verify organizers
 - moderate content
 - manage disputes
-

5. SYSTEM ARCHITECTURE

Frontend Stack

Mobile App

Flutter

Why Flutter:

- cross-platform deployment
- single codebase
- fast iteration
- lower engineering cost
- excellent UI performance

State Management

Recommended:

- Riverpod OR
- Bloc

Preferred: Riverpod

Backend Stack

Recommended Option: Supabase

Why Supabase:

- PostgreSQL database
- real-time subscriptions
- built-in auth
- row-level security
- cheaper scaling
- easier analytics
- SQL flexibility

Firebase is faster initially. Supabase is stronger long term.

Recommendation: Use Supabase.

Backend Components

Services

Authentication

- OTP login
- OAuth
- session management

Database

PostgreSQL via Supabase

Storage

- event images
- venue media
- QR tickets

Edge Functions

Used for:

- ticket generation
- payment verification
- notifications
- fraud checks

Push Notifications

Firebase Cloud Messaging

6. DATABASE DESIGN

Core Tables

users

- id
- username
- phone
- email

- role
- profile_image
- created_at

venues

- id
- name
- description
- address
- latitude
- longitude
- capacity
- verified

organizers

- id
- user_id
- brand_name
- verified

events

- id
- organizer_id
- venue_id
- title
- description
- genre
- start_time
- end_time
- cover_image
- status

ticket_types

- id
- event_id
- name
- price
- quantity
- sold_count

tickets

- id
- user_id
- event_id

- qr_code
- payment_status
- checkin_status

payments

- id
- ticket_id
- amount
- provider
- transaction_ref
- status

scans

- id
- ticket_id
- scanned_by
- scan_time
- device_id

7. PAYMENT FLOW ARCHITECTURE

MVP Payment Strategy

DO NOT build proprietary payments initially.

Use:

- deep linking
- payment confirmations
- transaction verification

Payment Flow

1. User initiates payment
 2. Redirect to wallet app
 3. User completes payment
 4. Webhook/verification triggered
 5. Ticket issued automatically
 6. QR generated
-

8. QR SYSTEM DESIGN

QR Payload

Contains:

- encrypted ticket ID
 - event ID
 - checksum signature
 - timestamp
-

Validation Logic

Scanner verifies:

- authenticity
 - unused status
 - event match
 - expiry
-

9. UI/UX DIRECTION

Visual Identity

Style

Dark-mode-first cyber nightlife aesthetic.

Influences:

- Resident Advisor
 - Boiler Room
 - DICE
 - Apple Music
 - modern fintech interfaces
-

Color Palette

Primary

Electric Blue

00AEEF

Accent

Neon Purple

8B5CF6

Background

Near Black

0A0A0A

Surface

Dark Graphite

161616

Typography

Recommended Fonts

- Inter
 - SF Pro
 - Satoshi
-

10. ADMIN PANEL

Required Internal Tools

Moderation

- remove fake events
- suspend organizers
- manage disputes

Verification

- verify venues
- approve promoters
- manage payouts

Analytics

- total ticket sales
 - active users
 - venue growth
 - revenue dashboard
-

11. SECURITY REQUIREMENTS

Critical Requirements

Authentication Security

- JWT refresh rotation
- OTP expiration
- rate limiting

Ticket Fraud Prevention

- single-use QR validation
- encrypted payloads
- device logging

Payment Security

- transaction verification
 - webhook validation
 - replay attack prevention
-

12. ANALYTICS STACK

Recommended Tools

Product Analytics

- PostHog OR
- Mixpanel

Track:

- user retention
 - conversion funnels
 - ticket purchases
 - event popularity
-

Crash Monitoring

- Sentry
-

13. CLOUD INFRASTRUCTURE

Initial Deployment

Frontend

- App Store
- Google Play

Backend

- Supabase Cloud

CDN

- Cloudflare
-

14. MVP DEVELOPMENT ROADMAP

WEEK 1-2

Planning + UI/UX

Deliverables:

- wireframes
 - user journeys
 - design system
 - database schema
 - technical architecture
-

WEEK 3-4

Core Backend Setup

Deliverables:

- authentication
 - database setup
 - event APIs
 - user APIs
 - ticket models
-

WEEK 5-7

Mobile App Development

Deliverables:

- event feed
 - event detail pages
 - ticket purchasing
 - user profiles
 - notifications
-

WEEK 8–9

Organizer Dashboard

Deliverables:

- event creation
 - analytics dashboard
 - QR scanning system
-

WEEK 10

Payment Integrations

Deliverables:

- KBZPay integration
 - WavePay integration
 - verification systems
-

WEEK 11

QA + Security Testing

Deliverables:

- stress testing
 - fraud testing
 - payment testing
 - scan validation testing
-

WEEK 12

Closed Beta Launch

Invite:

- promoters

- DJs
 - venues
 - university organizers
-

15. TEAM STRUCTURE

Lean MVP Team

Product Lead

Responsible for:

- roadmap
- partnerships
- operations

Flutter Engineer

Responsible for:

- mobile application
- UI implementation

Backend Engineer

Responsible for:

- APIs
- database
- payment systems

UI/UX Designer

Responsible for:

- design system
- interaction flows
- branding

Community/Partnership Lead

Responsible for:

- venue onboarding
- promoter acquisition
- creator partnerships

16. ESTIMATED MVP COSTS

Lean MVP Budget

Engineering

\$20,000–\$45,000

UI/UX

\$3,000–\$8,000

Infrastructure

\$500–\$2,000 initial

Marketing + Launch

\$5,000–\$15,000

Operations

\$3,000–\$10,000

Estimated MVP Range

\$35,000–\$80,000

This fits within the previously defined \$100,000 strategic budget.

17. KPI TARGETS

First 6 Months

User Targets

- 15,000+ installs
- 5,000 MAU
- 35% retention

Event Targets

- 300+ events listed
- 50+ active organizers
- 20+ venues onboarded

Revenue Targets

- positive ticket GMV growth
 - repeat organizer usage
 - initial SaaS subscriptions
-

18. FUTURE EXPANSION LAYERS

Phase 2 Features

Social Layer

- friend attendance
- social graph
- creator following

Venue Monetization

- table booking
- bottle service
- dynamic pricing

Fintech Expansion

- stored wallet
- nightlife loyalty points
- creator payouts
- BNPL integration

AI Layer

- personalized event recommendations
 - demand forecasting
 - attendance prediction
 - promoter insights
-

19. STRATEGIC POSITIONING

The strongest long-term positioning is NOT: "event app"

It is:

"Operating System for Urban Entertainment"

That positioning:

- increases valuation potential
 - expands monetization pathways
 - attracts infrastructure-focused investors
 - enables future fintech evolution
-

20. RECOMMENDED NEXT ACTIONS

Immediate Founder Priorities

Priority 1

Finalize:

- brand name
- logo
- visual identity
- domain

Priority 2

Build:

- Figma prototype
- user flow demos
- investor visuals

Priority 3

Recruit:

- 5 pilot promoters
- 3 launch venues
- 2 university event organizers

Priority 4

Develop:

- Flutter MVP
- Supabase backend
- QR infrastructure

Priority 5

Launch: closed beta events in Yangon

FINAL THESIS

This opportunity succeeds because it targets a structurally underserved market with:

- high social engagement
- rising digital payment behavior
- fragmented operational tooling
- low infrastructure maturity
- strong youth culture momentum

The combination of:

- marketplace dynamics
- SaaS tooling
- fintech adjacency
- nightlife behavioral data creates a potentially defensible and scalable platform business.

The MVP should focus aggressively on:

1. Event discovery
2. Ticketing reliability
3. Promoter operational efficiency
4. Venue onboarding
5. Retention loops

If those metrics validate successfully in Yangon, regional ASEAN expansion becomes strategically viable.
