

NOX — Consumer Prototype App

Urban Entertainment Infrastructure Platform

User-Facing Product Prototype Blueprint

1. PRODUCT VISION

NOX is not positioned as a generic event marketplace.

The consumer experience is designed as:

- a nightlife discovery engine
- a digital social pulse of the city
- a premium ticketing experience
- an urban culture operating system
- a nightlife identity layer

The app must feel:

- cinematic
- socially magnetic
- premium
- fast
- culturally alive
- immersive without becoming chaotic

Core positioning:

“Discover what the city feels tonight.”

The MVP validates:

- event discovery demand
 - digital ticket purchasing behavior
 - nightlife retention loops
 - venue trust systems
 - localized payment adoption
 - nightlife recommendation infrastructure
-

2. CORE USER PERSONA

Primary Users

Urban Gen Z + Millennials (18–35)

Behaviors:

- mobile-first
- social-first
- nightlife-oriented
- digitally active
- music-culture engaged
- FOMO-driven
- cashless payment adoption increasing

Primary motivations:

- finding where people are going tonight
 - discovering culturally relevant events
 - avoiding fake or low-quality events
 - frictionless entry experiences
 - belonging to the city's active social layer
-

3. EXPERIENCE THESIS

The app should create:

- FOMO without desperation
- exclusivity without elitism
- nightlife energy without visual chaos
- fintech clarity without corporate coldness

Users should feel:

- plugged into the city
- ahead of the crowd
- socially aware
- culturally connected
- part of something active

Design philosophy:

Dark luxury urban infrastructure.

4. APP INFORMATION ARCHITECTURE

Main Navigation

Bottom floating glass navigation:

1. Discover
2. Tickets
3. Pulse
4. Inbox
5. Profile

Navigation behavior:

- neon active glow
- blurred glass surface
- soft motion transitions
- floating elevated appearance

5. MVP CONSUMER FEATURES

5.1 Authentication

Supported methods:

- Phone OTP login
- Google Login
- Apple Login

Onboarding setup:

Users choose:

- favorite genres
- nightlife preferences
- favorite venues
- preferred event styles

Genres:

- EDM
- Hip-Hop
- Rock

- Techno
- Live Bands
- Underground
- Campus Events
- Festivals
- Afterparties

User profile stores:

- saved events
 - purchased tickets
 - attended events
 - followed creators
 - preferences
-

6. DISCOVER EXPERIENCE

Home Feed Structure

The feed is the emotional core of NOX.

Structure:

Hero Banner

Large cinematic event banner.

Contains:

- animated gradient overlays
- dynamic event visuals
- event CTA
- countdown timer
- live attendance indicators

Headline examples:

- Tonight's Pulse
 - Discover The Night
 - The City After Dark
-

Trending Events Section

Scrollable cinematic event cards.

Each card contains:

- event cover image
- title
- venue
- date/time
- price
- attendance count
- verification badge
- genre tags

Card interactions:

- soft scale animation
 - glow interaction
 - smooth parallax motion
-

Genre Filter System

Horizontal glowing pills:

- EDM
- Techno
- Hip-Hop
- Underground
- Rooftop
- Live Music
- Festival
- Afterparty

Behavior:

- animated active state
 - blur transitions
 - haptic interaction
-

Nearby Events

Geo-aware recommendations.

Displays:

- distance
 - event popularity
 - social activity
 - venue reputation
-

Recommended For You

Initial recommendation logic:

- genre preference
- attendance history
- save behavior
- trending local activity

Future AI layer:

- attendance prediction
 - nightlife behavior clustering
 - social recommendation engine
-

7. EVENT DETAIL EXPERIENCE

Hero Section

Full-screen cinematic imagery.

Contains:

- gradient overlay
- event title
- venue
- organizer
- attendance stats
- date/time
- sticky CTA button

Primary CTA:

Secure Entry

Event Information

Includes:

- description
 - event schedule
 - lineup/DJs
 - dress code
 - age restrictions
 - event rules
-

Venue Module

Displays:

- venue photography
 - map integration
 - address
 - venue reputation
 - verified badge
 - operating hours
-

Social Layer

MVP Lite Version:

- attendance indicators
- trending status
- save counts
- creator follows

Phase 2:

- friend attendance
 - group coordination
 - event chat
 - creator communities
-

Related Events

Cross-promotes:

- same genre
 - same venue
 - same promoter
 - same audience cluster
-

8. TICKET PURCHASE FLOW

Ticket Selection

Ticket tiers:

- Early Bird
- General Admission
- VIP
- Couple Package

Displays:

- remaining inventory
 - popularity indicators
 - pricing
 - perks
-

Checkout Experience

Checkout philosophy:

- ultra-fast
- low-friction
- fintech-grade trust

Supported payments:

- KBZPay
- WavePay
- AyaPay
- CBPay
- Bank Transfer

Flow:

1. Select ticket
2. Choose quantity
3. Choose payment provider
4. Redirect to wallet
5. Verify payment
6. Generate QR ticket
7. Deliver ticket instantly

9. DIGITAL TICKET EXPERIENCE

Ticket Design

The ticket must feel collectible.

Design:

- holographic gradients
- animated QR
- event branding
- premium motion effects
- futuristic aesthetic

Ticket states:

- active
- used
- expired
- transferred

Ticket information:

- attendee name
 - event
 - ticket tier
 - timestamp
 - QR payload
-

10. QR ENTRY EXPERIENCE

Entry System

Goals:

- frictionless entry
- anti-fraud validation
- fast throughput
- trust creation

Validation:

- unique encrypted QR
- duplicate prevention
- event ownership validation
- real-time verification
- offline fallback support

Visual feedback:

Success:

- emerald pulse glow
- vibration feedback
- confirmation animation

Failure:

- red warning state
 - clear error messaging
-

11. SAVED EVENTS & NOTIFICATIONS

Saved Events

Users can:

- save events
 - follow venues
 - follow organizers
 - create personal nightlife calendar
-

Push Notification System

Notification categories:

- upcoming events
- ticket reminders
- lineup announcements
- trending nearby events
- sold-out alerts
- cancellation notices

Notification style:

- concise
- culturally aware
- premium tone

Examples:

- Tonight is moving fast.
 - Your entry is secured.
 - The city's pulse just shifted.
 - Final tickets remaining.
-

12. PROFILE EXPERIENCE

Profile Layout

Displays:

- profile image
- nightlife stats
- favorite genres
- attended events
- saved events
- ticket history
- followed creators

Future layer:

- nightlife identity score
 - loyalty status
 - collectible attendance badges
-

13. PULSE TAB (SOCIAL DISCOVERY)

Purpose

This becomes NOX's long-term retention engine.

The Pulse tab visualizes:

- what's trending tonight
- where crowds are moving
- active districts
- breakout events
- creator momentum

MVP Version:

- trending events
- trending genres
- city hotspots
- fast social indicators

Future Version:

- live attendance heatmaps
 - social coordination
 - nightlife graph
 - creator ecosystems
-

14. UI SYSTEM

Design Direction

Dark luxury + neon-tech minimalism.

Visual inspirations:

- Apple Music
 - DICE
 - Resident Advisor
 - cyberpunk fintech interfaces
-

Core Colors

Background:

• **070707**

Surface:

• **141414**

Primary Action:

• **00AEEF**

Accent:

• **8B5CF6**

Success:

• **00D68F**

Text:

• **F5F7FA**

Typography

Primary Font:

- Satoshi
- Inter fallback

Typography style:

- cinematic headlines
- minimal body text
- compact labels
- generous spacing

Motion Design

Motion rules:

- smooth
- fast
- emotionally guided
- never gimmicky

Recommended timing:

200–350ms transitions.

Microinteractions:

- card hover scale
- glow transitions
- ticket success pulse
- QR validation flash
- subtle page transitions

15. REQUIRED MVP SCREENS

Consumer App Screens

1. Splash Screen
 2. Onboarding
 3. Authentication
 4. Discover Feed
 5. Event Detail
 6. Ticket Checkout
 7. Digital Ticket Wallet
 8. Saved Events
 9. Notifications Inbox
 10. Profile
 11. Pulse Feed
 12. Search + Filters
-

16. MOBILE TECH STACK

Frontend

Framework:

- Flutter

Architecture:

- feature-first modular architecture

State Management:

- Riverpod

Navigation:

- GoRouter

Offline Storage:

- Hive
-

Backend

API:

- NestJS

Database:

- PostgreSQL via Supabase

Realtime:

- Supabase Realtime

Storage:

- Supabase Storage

Notifications:

- Firebase Cloud Messaging

Analytics:

- PostHog
- Metabase

Monitoring:

- Sentry

Caching:

- Redis
-

17. DATABASE ENTITIES

Core entities:

- users
 - venues
 - organizers
 - events
 - ticket_types
 - tickets
 - payments
 - scans
 - notifications
 - saved_events
 - follows
-

18. API STRUCTURE

Authentication

- POST /auth/login
- POST /auth/verify-otp
- POST /auth/refresh

Events

- GET /events
- GET /events/:id
- GET /events/trending
- GET /events/nearby

- GET /events/recommended

Tickets

- POST /tickets/purchase
- GET /tickets/me
- POST /tickets/validate

Profile

- GET /profile
 - PATCH /profile
-

19. ANALYTICS STRATEGY

Key metrics:

- DAU
- MAU
- retention
- save rate
- ticket conversion
- event CTR
- checkout completion
- attendance rate
- repeat purchase behavior

Behavior tracking:

- event discovery flow
 - recommendation effectiveness
 - venue popularity
 - nightlife district trends
 - peak nightlife windows
-

20. SECURITY ARCHITECTURE

Critical protections:

- JWT rotation
- OTP expiration
- request throttling
- fraud monitoring

- webhook verification
 - encrypted QR payloads
 - duplicate scan prevention
 - replay attack protection
-

21. PHASE 2 EXPANSION

Social Layer

- friend attendance
- nightlife groups
- creator follows
- event chat
- nightlife identity graph

Fintech Layer

- wallet infrastructure
- nightlife loyalty points
- BNPL
- nightlife credits
- creator payouts

AI Layer

- personalized recommendations
 - attendance prediction
 - nightlife forecasting
 - demand clustering
 - promoter insights
-

22. STRATEGIC DIFFERENTIATION

NOX is not competing as:

- a basic event listing app
- a generic ticketing platform
- a party discovery app

NOX is positioned as:

Urban Entertainment Infrastructure

This creates:

- stronger retention loops
 - better monetization layers
 - higher platform defensibility
 - stronger investor narrative
 - scalable ASEAN expansion potential
-

23. FINAL PRODUCT THESIS

The NOX consumer application succeeds if users begin replacing fragmented nightlife coordination across:

- Facebook
- Telegram
- Instagram stories
- promoter DMs
- spreadsheets
- cash-based ticketing

with:

- trusted discovery
- frictionless entry
- verified venues
- digital ticketing
- nightlife social infrastructure

The app must feel like:

“The operating system for the city after dark.”
